Who We Are

Zehanixx is a forward-thinking digital solutions company headquartered in the United Arab Emirates, proudly serving businesses across UAE, GCC, India, and beyond. We are a team of 8 passionate experts who bring together technology, creativity, and security to deliver digital products that actually work in the real world — for real businesses, real people, and real results.

We are not just another IT company. Zehanixx is your long-term digital growth partner. Whether you are a startup launching your first website, an enterprise needing cybersecurity protection, or a school looking for a campus management system — we design and build tailor-made solutions for your exact needs. No templates. No shortcuts. Every product we deliver is built from scratch, with care, quality, and purpose.

Our Mission

To empower businesses of every size — from small shops to large enterprises — with world-class digital tools, unbreakable security, and intelligent automation, all delivered with UAE-rooted expertise and a global mindset.

Our Vision

To become the most trusted digital partner for businesses across the Middle East and South Asia, known for delivering quality solutions that make technology simple, powerful, and accessible for everyone.

■ Excellence	We deliver top-quality work on every single project, big or small.
■ Security First	We build everything with protection and safety at the core.
■ Partnership	We treat every client as a long-term partner, not a one-time transaction.
■ Innovation	We stay ahead of technology trends so our clients always have the best.
■ Global Thinking	We serve the world while understanding local cultures and markets.
■ Reliability	We stay with you even after the project is delivered — for life.

Web Services

Your website is your digital storefront. It is often the very first impression a customer gets of your business. We make sure it is stunning, fast, secure, and works perfectly on every device — from a mobile phone in Dubai to a desktop computer in London.

■ Website Design & Development

We build beautiful, modern websites that are designed to impress and convert visitors into customers. Every website we create is fully custom — no generic templates — and optimised for all screen sizes including phones, tablets, and desktops.

- ◆ Fully custom design matching your brand identity
- ◆ E-commerce stores with shopping cart, payments, and order tracking
- ◆ Landing pages that drive leads and sales
- ◆ Business websites, portfolios, NGO and educational sites
- ◆ Fast loading speed — under 3 seconds guaranteed
- ◆ WhatsApp chat button integration for instant customer contact
- ◆ Google Maps, social media, and contact form integrations

■ Website Handling & Maintenance

A website is not a one-time project — it needs constant care. We handle all the technical work so you never have to worry about your site going down, getting hacked, or becoming outdated. Think of us as your 24/7 website caretaker.

- ◆ Daily backups so your data is never lost
- ◆ Software and plugin updates to keep everything running smoothly
- ◆ Security monitoring to detect and stop threats immediately
- ◆ Speed optimisation — we keep your site fast at all times
- ◆ Content updates — change text, images, prices whenever you need
- ◆ Uptime monitoring — we are alerted the moment your site goes offline
- ◆ Monthly performance reports in plain language

■ SEO Optimisation

Search Engine Optimisation (SEO) is the process of making your website appear at the top of Google search results when potential customers look for what you offer. More visibility = more customers = more revenue. It is that simple.

- ◆ Keyword research — finding the exact words your customers search for
- ◆ On-page SEO — optimising your titles, content, and page structure
- ◆ Off-page SEO — building links and authority across the web
- ◆ Local SEO — appearing in searches for your city or region (e.g. 'best restaurant in Abu Dhabi')
- ◆ Google Business Profile setup and management
- ◆ Monthly ranking reports showing your progress
- ◆ Competitor analysis — seeing what your rivals do and beating them

■ WhatsApp & Communication Integration

WhatsApp is how millions of people communicate every day in the UAE and around the world. We integrate WhatsApp directly into your website and business systems so customers can reach you with one tap, and your team can manage all conversations in one place.

- ◆ WhatsApp chat button on your website — one tap to start a conversation
- ◆ WhatsApp Business API integration for large-scale messaging
- ◆ Automated WhatsApp messages — order confirmations, appointment reminders, delivery updates
- ◆ WhatsApp chatbot — answers customer questions automatically 24/7 even when you are asleep
- ◆ Bulk WhatsApp broadcast to send promotions to hundreds of customers at once
- ◆ WhatsApp + CRM link — every conversation saved and tracked automatically
- ◆ Email integration — automated emails for invoices, confirmations, newsletters

Development Services

Beyond websites, we build powerful digital products from scratch — mobile applications, cloud platforms, and full enterprise systems. If you can imagine it, we can build it. Our development team uses the latest technologies to deliver products that are fast, reliable, and built to scale as your business grows.

■ ■ Full Stack Development

Full Stack means we handle everything — the part users see (frontend) and the engine that runs behind the scenes (backend). We build complete digital systems from design to database, from user interface to server infrastructure.

- ◆ Custom web applications for any business need
- ◆ API integrations — connecting your systems with payment gateways, Google, WhatsApp, and more
- ◆ Database design and management — your data stored safely and efficiently
- ◆ Admin dashboards — manage your entire business from one screen
- ◆ Real-time features — live chat, live notifications, live tracking
- ◆ Scalable architecture — your system grows as your business grows
- ◆ Cloud deployment on AWS, Google Cloud, or any provider

■ ■ SaaS Development

SaaS stands for Software as a Service — meaning software that users access through their browser or app, paid for by subscription. Think of tools like Netflix, Zoom, or Shopify. We help businesses build and launch their own subscription-based digital products.

- ◆ Multi-tenant platforms — one system serving thousands of clients simultaneously
- ◆ Subscription billing and payment integration (Stripe, PayTabs, PayFort)
- ◆ User authentication — login, registration, password reset, two-factor security
- ◆ Role-based access — admins, managers, and users all see different things
- ◆ Usage analytics — track how customers use your product
- ◆ Automatic invoicing and billing management
- ◆ White-label options — sell the software under your own brand

■ Mobile App Development

Over 70% of internet users access the web through mobile phones. A mobile app puts your business directly in your customers' pockets. We build apps for Android, iPhone, and both at once — with the same great experience on every device.

- ◆ Android apps (Google Play Store)
- ◆ iOS apps (Apple App Store)
- ◆ Cross-platform apps — build once, run on both Android and iPhone
- ◆ Push notifications — send messages directly to your customers' phones
- ◆ Offline functionality — app works even without internet
- ◆ In-app payments, bookings, and order management
- ◆ GPS and location-based features
- ◆ WhatsApp, social media, and third-party integrations

■ AI Chatbots & Automation

An AI chatbot is a virtual assistant that talks to your customers automatically — answering questions, taking orders, booking appointments, and providing support 24 hours a day, 7 days a week, without any human involvement. It is like hiring a staff member who never sleeps.

- ◆ AI chatbot for your website — answers visitor questions instantly
- ◆ WhatsApp chatbot — customers chat with your business on WhatsApp automatically
- ◆ Instagram and Facebook chatbot — respond to DMs and comments automatically
- ◆ Multi-language chatbots — Arabic, English, Hindi, and more
- ◆ Appointment booking bot — customers book meetings without calling you
- ◆ Order tracking bot — customers check their order status in seconds
- ◆ Lead capture — chatbot collects customer details and sends them to your CRM
- ◆ Intelligent escalation — passes complex queries to a human agent seamlessly

Cybersecurity Services

Cybercrime costs businesses over \$8 trillion globally every year. A single hack can destroy your reputation, leak your customers' data, and shut down your business overnight. At Zehanixx, we have a CPT-certified (Certified Penetration Tester) security team that protects your digital assets with real, proven expertise — not guesswork.

■ Security Testing & VAPT

VAPT stands for Vulnerability Assessment and Penetration Testing. In simple terms, we act like ethical hackers — we attack your own systems to find weaknesses before real hackers do. This is the most important step to securing your business.

- ◆ Website penetration testing — finding weak spots in your website before hackers do
- ◆ Mobile app security testing — checking your app for hidden vulnerabilities
- ◆ Database security audit — making sure your customer data is locked and safe
- ◆ OWASP Top 10 testing — the 10 most common and dangerous web security risks
- ◆ Network penetration testing — finding gaps in your company network
- ◆ Detailed security report with every finding explained in plain language
- ◆ Risk scoring — each vulnerability rated as Critical, High, Medium, or Low

■ Security Protection & Hardening

After we find the vulnerabilities, we fix them — and we make your entire system tougher against future attacks. This process is called 'hardening'. Think of it like upgrading your locks, installing alarm systems, and setting up security cameras all at once.

- ◆ Fixing all vulnerabilities found during penetration testing
- ◆ Firewall configuration — only the right people can access your systems
- ◆ SSL certificate installation — green padlock and encrypted connections for your website
- ◆ Two-factor authentication setup for admin accounts
- ◆ Secure server configuration — closing all unnecessary entry points
- ◆ Ongoing security monitoring — 24/7 alerts for suspicious activity
- ◆ Security awareness training for your team — the human factor matters

Why Every Business Needs Cybersecurity

■ Data Theft

Hackers steal customer credit card details, personal information, and confidential business data to sell on the dark web.

■ Ransomware	Criminals lock your entire computer system and demand payment (ransom) to unlock it — sometimes wiping everything if you do not pay.
■ Fake Websites	Fraudsters create fake copies of your website to trick your customers into giving them money or personal details.
■ Email Phishing	Fraudulent emails pretend to be from your bank, supplier, or government to steal passwords and money.
■ ■ Website Downtime	Hackers can crash your website entirely — causing you to lose customers, sales, and reputation in minutes.

Smart Solutions & Campus ERP

The smartest businesses use automation and intelligent tools to do more with less. Our Smart Solutions category includes AI-powered automation, customer relationship management, and a purpose-built campus management system for educational institutions.

■ CRM Solutions

A CRM (Customer Relationship Management) system is a tool that keeps track of every customer, every sale, every conversation, and every opportunity — all in one place. Instead of using notebooks, spreadsheets, or memory, your team has a complete picture of every client at a glance.

- ◆ Contact management — store every customer's details, history, and preferences
- ◆ Sales pipeline — see exactly where each deal is in the sales process
- ◆ Automated follow-up — send emails or WhatsApp messages to leads automatically
- ◆ Task management — assign tasks to team members and track completion
- ◆ Invoice and quote generation — create professional invoices in seconds
- ◆ Performance reports — see which products sell most and which team members perform best
- ◆ Integration with WhatsApp, email, and website contact forms

■ AI Business Automation

Business automation means using technology to do repetitive tasks automatically — without a human having to do them every time. This saves hours of work every day, reduces human errors, and allows your team to focus on what matters: growing the business.

- ◆ Automated email campaigns — send the right email to the right customer at the right time
- ◆ Invoice automation — generate and send invoices automatically when an order is placed
- ◆ Social media automation — schedule and publish posts across multiple platforms
- ◆ Document processing — extract information from forms, contracts, and documents automatically
- ◆ Inventory alerts — get notified automatically when stock is running low
- ◆ Report generation — receive business performance reports every Monday morning automatically
- ◆ Workflow automation — multi-step processes handled by AI without human intervention

■ ERP Campus Solution

ERP stands for Enterprise Resource Planning — an all-in-one system that manages every aspect of a school, college, or university from one central platform. Our Campus ERP is designed specifically for educational institutions in the UAE and the wider region.

- ◆ Student enrollment and admission management
- ◆ Attendance tracking — teachers mark attendance digitally, parents see it instantly
- ◆ Fee management — collect fees online, track payments, send reminders automatically
- ◆ Exam and result management — publish grades online, generate report cards automatically
- ◆ Library management — track books, borrowings, and returns
- ◆ Staff and HR management — leaves, payroll, and performance tracking
- ◆ Parent portal — parents see their child's attendance, grades, and fees in real time
- ◆ WhatsApp and SMS notifications to parents for every important update

■ Mail & Communication Integration

Professional communication is the backbone of any business. We set up and integrate your email systems, automated mail workflows, and multi-channel communication tools so nothing ever falls through the cracks and your customers always receive timely, professional responses.

- ◆ Professional business email setup (yourname@yourbusiness.com)
- ◆ Automated email responses — customers get an instant reply the moment they contact you
- ◆ Email marketing campaigns — designed newsletters sent to your subscriber list
- ◆ Transactional emails — order confirmations, password resets, shipping updates
- ◆ Email + CRM integration — every email automatically saved to the customer's profile
- ◆ Spam protection — ensuring your emails always reach inboxes, not junk folders
- ◆ Email analytics — see who opened your emails, clicked links, and converted

Serving Businesses Worldwide

Zehanixx is headquartered in the UAE and operates with a global mindset. We are equipped to serve businesses in any country, any time zone, and any language. Our digital-first approach means geography is never a barrier to getting world-class service.

- ◆ South Korea — Seoul
- ◆ China — Shanghai, Beijing
- ◆ Hong Kong
- ◆ Taiwan — Taipei

*"No matter where you are in the world — Zehanixx delivers. Same quality.
Same care. Same commitment."*

Your Trusted Digital Growth Partner

There are hundreds of digital agencies out there. So why Zehanixx? Here are six reasons our clients choose us and stay with us:

1	One-Stop Digital Hub Why deal with five different companies for your website, app, SEO, CRM, and security? Zehanixx does everything under one roof — one team, one point of contact, zero hassle. This saves you time, money, and the headache of coordinating between multiple vendors.
2	Regional Expertise We understand the UAE and GCC market deeply — the culture, the business landscape, the legal requirements (VAT compliance, Arabic language support), and what actually works for customers in this region. We are not a faraway company guessing what your market needs.
3	Tailored Solutions We never use ready-made templates or generic systems. Every website, app, and system we build is designed and developed from scratch, specifically for your goals, your brand, and your customers. You get something unique that truly represents your business.
4	Latest Technology & Security We use the most current and powerful tools available — AI, cloud computing, modern frameworks, and cutting-edge security practices. When you work with Zehanixx, you are always getting the latest and best technology available, not outdated systems.
5	Reliable Long-Term Support Many companies disappear after handing you the project. Not us. Zehanixx provides ongoing maintenance, monitoring, and support long after delivery. We are your digital partner for the long haul — we stay with you through every update, upgrade, and challenge.
6	Certified Cybersecurity Our CPT-certified security team provides professional penetration testing and security hardening. In a world where cyber threats grow every day, having certified experts protecting your business is not optional — it is essential. We keep your data, your customers, and your reputation safe.

✓ Bilingual Support (Arabic & English)	✓ VAT-Compliant Invoicing	✓ Local Market Expertise	✓ CPT-Certified Security	✓ 8 Expert Professionals

How We Work With You

We have refined a clear, transparent process over dozens of projects. Here is exactly what happens when you work with Zehanixx — from the first conversation to long after your project goes live.

Step 1 1	Discovery & Consultation We start with a free consultation — a conversation where we listen. We ask about your business, your goals, your challenges, and your vision. We want to fully understand what you need before suggesting anything. This ensures we design the right solution for you, not a generic one. ■ <i>Duration: 1–2 days</i>
Step 2 2	Planning & Proposal Based on what we learn, we create a detailed project plan and proposal. This includes the full scope of work, timeline, cost, and all deliverables clearly listed. No hidden fees, no surprises. You see exactly what you are getting and what it costs before any work begins. ■ <i>Duration: 2–3 days</i>
Step 3 3	Design & Prototyping Our designers create visual mockups and prototypes of your project. For websites, you see exactly how each page will look before any coding starts. For apps, you see the screen layouts and user flow. You give feedback, we refine — until it is exactly right. ■ <i>Duration: 3–7 days</i>
Step 4 4	Development & Building Once designs are approved, our developers build the complete solution. We work in phases, sharing progress updates regularly. You are never left in the dark. We build with quality, security, and performance as the foundation of everything. ■ <i>Duration: 1–8 weeks depending on project size</i>
Step 5 5	Testing & Quality Assurance Before anything goes live, we test thoroughly. Every button, every link, every feature is tested across multiple devices and browsers. For security projects, full penetration testing is performed. We do not release anything until it meets our high quality standards. ■ <i>Duration: 3–7 days</i>

Step
6

6

Launch & Handover

We launch your project professionally and provide complete handover — including training, documentation, and all login credentials. You receive everything you need to manage and use your new digital asset confidently.

■ *Duration: 1–2 days*

Step
7

7

Ongoing Support & Growth

Our relationship does not end at launch. We provide ongoing maintenance, security monitoring, and support. As your business grows, we grow with you — adding features, improving performance, and keeping everything running perfectly.

■ *Ongoing — for as long as you need us*

10+ Industries. Countless Success Stories.

Our expertise spans across industries. No matter what sector you operate in, we have the knowledge, tools, and experience to deliver a solution that fits your specific world.

■ Healthcare Appointment booking systems, patient portals, hospital websites, telemedicine platforms, and HIPAA-compliant secure systems.	■ Education School and university websites, e-learning platforms, student portals, campus ERP systems, and online exam tools.
■ Retail & E-Commerce Online stores, inventory management, order tracking, payment gateways, and customer loyalty programmes.	■ Hospitality & Tourism Hotel booking systems, restaurant websites, tour operator platforms, and review management tools.
■ Real Estate Property listing websites, virtual tours, agent portals, lead management CRMs, and rental management systems.	■ Startups & Tech MVPs, SaaS platforms, mobile apps, investor pitch sites, and scalable cloud infrastructure.
■ Manufacturing & Logistics Supply chain systems, delivery tracking, warehouse management, and operational dashboards.	■ Food & Beverage Online ordering systems, food delivery app integrations, loyalty programmes, and restaurant management tools.
■ Professional Services Law firm websites, accounting portals, consulting platforms, and client management systems.	■ Government & NGO Official portals, citizen services, donation platforms, transparency reports, and public information systems.

Ready to Grow & Secure Your Business?

Let us have a conversation. Tell us about your business and what you want to achieve — and we will show you exactly how Zehanixx can help. The first consultation is always free.
